

Chinese Weekly Influenza Surveillance Report

June 15 to 22, 2025 (Week 25)

(All data are preliminary and may change as more reports are received)

Summary

- Influenza activity in the southern provinces and northern provinces was low. There was 1 ILI outbreak reported in this week.
- Among influenza viruses antigenically characterized by CNIC since October 1, 2024, 3712(98.6%) influenza A(H1N1)pdm09 viruses were characterized as A/Victoria/4897/2022-like; 117(59.7%) influenza A(H3N2) viruses were characterized as A/Croatia/10136RV/2023(egg)-like, 183(93.4%) influenza A(H3N2) viruses were characterized as A/District of Columbia/27/2023(cell)-like; 199(97.1%) influenza B/Victoria viruses were characterized as B/Austria/1359417/2021-like.
- Among the influenza viruses tested by CNIC for antiviral resistance analysis since October 1, 2024, all but 107 influenza A(H1N1)pdm09 were sensitive to neuraminidase inhibitors, all A(H3N2) and B viruses were sensitive to neuraminidase inhibitors; all A(H1N1)pdm09, A(H3N2) and B viruses were sensitive to endonuclease inhibitors.

Surveillance of outpatient or emergency visits for Influenza-like Illness (ILI)

During week 25, the percentage of outpatient or emergency visits for ILI (ILI%) at national sentinel hospitals in southern provinces was 4.3%, the same as the last week (4.3%), lower than the same week of 2022, 2023 and 2024 (7.8%, 5.4% and 5.7%). (Figure 1)

Note: Analysis in this part was based on data from sentinel hospitals belong to national influenza surveillance network.

During week 25, ILI% at national sentinel hospitals in northern provinces was 2.9%, the same as the last week (2.9%), higher than the same week of 2022 (1.8%), lower than the same week of 2023 and 2024 (3.5% and 3.8%). (Figure 2)
